ROTOR

JUICE EXTRACTOR - SANAMAT PLUS

The most professional version in the compact class

SANAMAT PLUS – HYGIENIC, SOLID, FAST, QUIET

The fruit- and vegetable juicer Sanamat Plus enables the production of your own, fresh fruit- and vegetable juices, which you can serve to your guests immediately. – Freshly squeezed juices are always popular everywhere, because they are pure and full of vitamins. In addition, they contain no preservatives or other chemical additives, with the Sanamat Plus you always produce the exact amount needed at any time.

No barriers are imposed on your imagination: Juices from local and exotic fruits, from all kind of vegetables, even sophisticated cocktails can be quickly and easily prepared before your customers very eyes.

Very quiet, place saving, solid and elegant

Built for the hard daily service in bars, restaurants, tearooms, homes, clinics and diet kitchens.

Efficient and productive

The Sanamat Plus is a commercial juice extractor with continuous pulp ejection, the residue is automatically ejected into a container. The machine separates the juice and pulp perfectly, thanks to a carefully thought out sealing system. The patented construction, and the electronically exactly adjusted speed 8000 rpm (also under load!) guarantee a maximum juice yield with fruits and vegetables.

The foundation is the solid, air cooled electronic motor, built by Rotor Lips Ltd. **The big, round feeding chute base** of 80 mm and the **high speed** allow **efficient juice extracting** from soft, big fruits. Thanks to the tilted motor base the juice outlet is optimal, even for smallest production quantities.

Indisputable hygienic and easy to clean

Lid, juice collecting bowl, centrifugal basket assembly, and the grating disc are made of **stainless steel**, the motor housing made of polished cast aluminium.

The grating disc is screwed into the centrifugal basket and can be exchanged, if worn out.

Solid, exchangeable centrifugal basket, entirely made out of stainless steel

No danger despite high speed

The **solid lid** (stainless steel-casting!) is secured with a safety clasp assembly. By opening the lid, the motor stops. A **built-in braking device** stops the centrifugal basket in seconds. So any danger of injury from rotating parts is avoided, and the waiting time reduced. Further guarantees for the safety:

- A **protective switch** prevents the motor from overloading and overheating.
- The Rotor Sanamat conforms to the international standards, CB certified, complying with NSF/ANSI 8.

For processing big quantities we recommend you our fruit and vegetable juicer Rotor Vitamat Power Juicer.

All rights reserved to make alterations without prior notice.

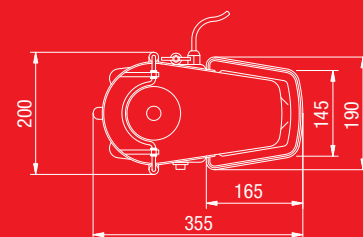

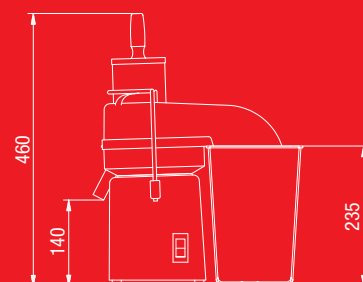

Your reseller:

Solid plunger made of strong polyethylene (authorized for use with food)

Trash container made of polystyrol (included)

Technical data

Power supply:
230 – 240 V / 2,6 A or
120 V / 5,2 A; 50 – 60 Hz

Peak power consumption:
approx. 800 W

Net weight: 9 kg

Measurement: 410 x 240 x 420 mm

Gross weight: 9,8 kg
