SANAMAT

**The quiet professional juicer**

## THE SANAMAT – QUIET, POWERFUL, COMPACT

The Sanamat vegetable juice extractor enables you to make your own fresh fruit and vegetable juices, which you can serve to your guests immediately. Freshly pressed juices are always popular everywhere, because they are pure and full of vitamins. In addition, they contain no preservatives or other chemical additives, with the Sanamat you always produce the exact amount needed at any time.

No barriers are imposed on your imagination: juices from local or exotic fruits, from all kinds of vegetables, even sophisticated cocktails can be prepared quickly and easily before your customers' very eyes.

The fruit and vegetable juice extractor Sanamat is very quiet, compact, solid and sturdy, built for the hard daily service in bars, restaurants, tearooms, homes ... and of course in clinics and in dietary cooking where fresh fruit and vegetable juices are of prime importance.

The Sanamat is a commercial juice extractor with continuous pulp ejection, the residue is automatically ejected into a container. The centrifugal basket with its grating disc and juice collecting bowl are made entirely of stainless steel. The cover and plunger are made from cast aluminium and plastic respectively, which are authorized for use with food. All these parts are completely hygienic and easy to clean.

The grating disc is screwed into the centrifugal basket and can be exchanged, if worn out.

The careful design, the powerful motor and the precisely balanced motor speed guarantee optimal juice yield with all fruits and vegetables.

### Technical features

- Motor housing in polished, cast aluminium
- Powerful air-cooled and high temperatures resistant electric motor
- Electronically controlled speed, that means constant speed of 8000 rpm, even when loaded
- Juice collecting bowl, centrifugal basket and grating disc in stainless steel 18/8
- Cover made from a special, polished aluminium alloy, approved for use with foods
- Optimal juice discharge, thanks to the slanting motor unit
- Perfect separation of juice and pulp thanks to the sealing system, whereby completely pure fruit and vegetable juice is obtained
- The filler opening of 68 mm and the high speed allow the production of large quantities of juice

### Safety features

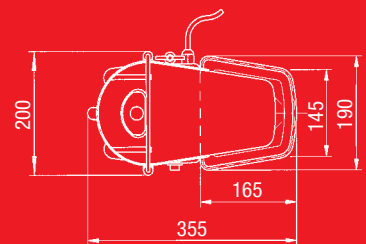

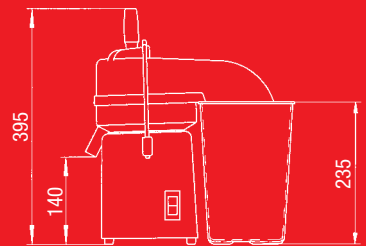

- By opening the safety clasp, the motor stops. When closing the clasp, the on/off switch must be reactivated (reset function)
- A built-in braking device stops the centrifugal basket in seconds when the cover is opened. Thereby any danger of injury from rotating parts is avoided
- A protective switch prevents the motor from overloading and overheating
- Designed in accordance with international standards, CB certified
- Complying with NSF/ANSI 8

For producing larger quantities of juice please ask for detailed information about our fruit and vegetable juice extractor Vitamat PowerJuicer.

We reserve the right to make technical changes at any time.
